

OneSpace Select Hosted Service

OneSpace delivered via a hosted service provides the tools and resources to rapidly deploy and benefit from CoCreate's collaborative software solutions. Focus on your core business needs. Determine the true value improved design communication can bring to your engineering design processes. By having CoCreate host your solutions, you avoid the fixed costs and inherent risks of implementing and maintaining a more complex IT infrastructure.

What is OneSpace Select Hosted Service?

OneSpace Select is an optimized delivery model for CoCreate's collaborative software solutions. CoCreate hosts the applications on a set of centralized resources, and provides access over the Internet or via a private network for end users. Leverage the power of the Internet to define the benefits of collaborative product development (CPD) for your organization.

Rely on Experts to Provide the OneSpace Solution for You

CoCreate's Professional Services team can have OneSpace up and running in as little as a day, without the need to burden your internal IT infrastructure. Our technical experts work with you to deploy a design communication solution quickly, for secure, reliable and powerful CPD.

The OneSpace Select alternative reduces your cost of owning and running OneSpace solutions. By having CoCreate host your solutions you avoid the fixed costs of buying the hardware infrastructure, hiring new IT resources and implementing backup solutions.

A Powerful, Scalable Solution

Our expertise provides a high degree of quality from day one, avoiding the steeper learning curve of customer-based application hosting.

As your CPD needs grow, OneSpace hosted services provides a continuously scalable solution. OneSpace Select handles increased volume requirements and automated version updates seamlessly whilst ensuring smooth upgrades and migration of your data without burdening your IT department.

Choice of Deployment Architectures

OneSpace Select can be delivered in one of two ways:

1. A Terminal Server (T/S) architecture utilizing the ICA protocol. The OneSpace client runs within a browser on the local machine.

The advantages of this approach are:

- Ultra-thin client download
- Full platform support (Windows, UNIX, MAC)
- Very low infrastructure overhead.

2. A Client Server (C/S) architecture that deploys a full client to the local machine.

This approach offers:

- Significantly reduced overhead
- Thin client download
- Enhanced performance in heavy modeling situations.

OneSpace Select Hosted Service

OneSpace Select Delivers

- A secure, reliable infrastructure, that includes Internet connectivity, firewall, application servers, Oracle database, operating system and hardware.
- Multi-level security: data security with firewalls and physical security with hand scanners and access keys.
- Scalable infrastructure to meet your performance needs.
- Full application technical support

Benefits

- Rapid deployment
- Demonstrate the value of collaborative design practices
- Managed and secure infrastructure
- No need to add expertise or expand IT infrastructure.

Software Deployment

- Complete communication between hosting team and customer team.
- Planning of hardware and network connectivity for optimal performance.
- E-seminars on key issues to optimize design communication.

Optimized and Maintained by CoCreate

- Pro-active problem detection and resolution
- Leading edge monitoring tools

- Database tuning for optimal performance
- Capacity planning
- Regularly scheduled data back-ups
- Timely, smooth application upgrades

Features

- Mainframe style construction
- Redundant connections to Internet
- Secure Network connectivity
- 24 X 7 monitoring
- Hardware acquisition and installation
- Proactive monitoring of systems
- Experienced,dedicated Select team
- Optional redundant RAID configurations
- Proactive upgrade recommendations
- Quick deployment of software updates
- Capacity planning and management

System Requirements

- Internet Explorer™ 5.0 or greater
 - Netscape™ 4.7 or greater
 - Internet connectivity of 56K or better
- For Terminal Server
- Windows 95/98™ or 2000™, HP-UX®, Solaris™, AIX™, Mac
- For Client Server
- Windows 95/98™ or 2000™, HP-UX®, Solaris™
