CUSTOMIZED ENCAPSULATION PROCESS DEVELOPMENT

PROGRAM HIGHLIGHTS
Customer designed a RF tracking device that had to withstand automated mail sorting processes and minimize susceptibility to normal handling of posted materials as the device traveled along standard business and consumer mail and postal routes in North America and Europe.

SOLUTION
The design incorporated a flexible circuit with a thin FR4 board material affixed to the flex circuit. The FR4 board required encapsulation at volume. The encapsulation had to meet weight and height restrictions while providing physical and environmental protection for the RF device. RF device functionality would be triggered at mail sorting stations where ingress/egress data would be recorded as the device entered and exited the mail sorting stations.

RESULT
Vexos implemented a proprietary process that enabled rapid curing of encapsulation while maintaining height and weight integrity and protection of the sensitive RF circuit. This resulted in a long term product line that has been running for over 10 years.
Dependable Quality
Vexos achieves the highest quality levels by utilizing the latest equipment, processes, quality standards and certifications across the organization; to enable a flawless launch of each individual program.
• Rigorous selection of sub-contractors or partner factories
• Performance evaluation and monitoring through regular audits of the factories
• Continuous training for personnel at all levels
• Document control to safeguard your data and release of technical documents
• Sample approval process including production part approval process (PPAP)

Certifications
• ISO 9001:2015
• ISO 14001:2015
• FDA registered
• FDA registered • CGP certification
• IATF 16949:2016
• RoHS and Non-RoHS
• OHSAS 18001:2007
• CGP certification
